

Order

This is a regex golf problem. You have to write a regex that matches all lines from one list and none from the second one. Matching is implemented as Perl's `m//`, so it's not a precise match. E.g. to match "SPOJ" you don't need regex `/^SPOJ$/` since it's enough to write `/PO/` or `/J/`.

The regexes submitted should be compatible with Perl regular expressions (version 5.20.1).

Score is calculated as follows: it's equal to the length of your regex and for every line from the first list that's not matched by your regex X points are added to your score. Analogically, for every line from the second list that's matched by your regex X points are added to your score. The lower your score is, the better. X often equals 10 but it's different in some problems. Check below this problem's X value.

To quickly check the quality of your solution visit the original [regex golf project](#).

Please don't look for solutions for this problem online or at least don't post them here if you didn't come up with them on your own.

Match all of these...

access
accloy
adeem
aflow
aglow
beefin
befist
billot
bossy
certy
chintz
chips
chort
cloop
coost
demos
fitty
flory
flossy
ghost
mopsy

And none of these...

analyse
balanism
baronet
biddable
griefless
harebrain
jestword
laicize
marvelry
oriole
pickietar
preferee
primness
pulghere
rebirth
scupper
serigraph
sororize
theowman
unfrayed
wagonman

X = 10
